

STEP ONE:

Gather your materials ready for setting up:

1. ezyGrow Planter/s
2. Fly Screen or Shade Cloth
3. Premium Potting Mix
4. Fertilisers & Mulch
5. Seedlings
6. Watering Can

TIP: Potting mix as opposed to soil mixes are best as they don't get water logged.

STEP TWO:

Fill up your ezyGrow Planter/s:

1. Site your planter on level ground
2. Place screen material over holes
3. Fill planters with potting mix

TIP: If the ground is a little uneven ensure the overflow tube is at the lowest point.

TIP: As you add the potting mix add some water crystals & slow release fertiliser in layers.

TIP: Use an organic fertiliser for best results.

STEP THREE:

Plant up your garden:

1. Add fertiliser & incorporate into the top
2. Water thoroughly until you see the water level in the tube
3. Plant seedlings & water in
4. Mulch around seedlings

TIP: Water collects in the base of the planter so you can turn the tube into your watering can to recycle the water and nutrients.

TIP: Fertilise your plants regularly with a liquid fertiliser for best results.

TIP: Water the whole growing area and not just around your plants.

TIP: Don't forget to harvest and replant your garden.
